PROFESSIONAL SUMMARY

First year Data Science student at the University of Melbourne with experience building full-stack web platforms and AI integrated systems through competitive hackathons as well as gaining first-hand consulting experience through industry projects and case competitions, improving my strategic interpretations. Seeking more opportunities to further my knowledge and apply my skills in Data Science and consulting alike.

EDUCATION

Bachelor of Science, Major in Data Science

University of Melbourne – WAM of 89.67

Calculus II, Foundations of Computing, Foundations of Business Analytics

Mar. 2026 – Nov. 2028

Melbourne, VIC

EXPERIENCE

EnAccess Maps Software Developer

Enactus

Aug. 2026 – Present.

Melbourne

EnAccess Maps is a web platform and developing app to improve accessibility for those with physical disability. Currently, this project is being expanded to target more areas of accessibility improvements.

- As part of the software developer team, I work with Google Map APIs to provide updated and consistent mapping features, Python as the main framework to build features and React to build user interfaces for the website.
- Also, contributing to the development phase of the mobile app and multiple features, creating new ideas to implement and expand the project.

Horizons Programme Internship – Digital Industry Project

Practera

Jun. 2026 – Jul. 2026

Melbourne

A program dedicated to providing real-world consulting experience hosted by the Practera Team

- Selected for a competitive 3-week digital industry consultancy project, conducted analysis of competitors, B2B customer markets, and social media expansion for a VET training provider
- Delivered final report and presentation to client's executive member on growth strategy recommendations

PROJECTS

Women in STEM Hackathon

Versent x Robogals x DSCubed

May. 2026 – May. 2026

Melbourne

- Created a fully functional web platform which aims to become a centralised location for girls in Yr 7 to 9 interested in STEM
- Designed and implemented an interactive discovery landing page and a dynamic opportunity map to connect Year 7-9 students with localized STEM workshops and activities

Customer Churn Predictor

Personal Project – Link: <https://github.com/dani3ll1u3745-sudo/Customer-churn-predictor.git>

Jun. 2026 – Present.

Melbourne

Over the course of 4 days, developed a predictor for customer churn based on Kaggle Telco data. Next steps are currently building fully-functional dashboard.

- Employed data wrangling workflow, identifying key features of churn such as tenure, service and contract type. Used various metrics like recall score, precision score and F1-score.
- Benchmarked Logistic Regression model against Random Forest model, with the former achieving an accuracy score of 80.4% and a 61% F1-score.

Hackiethon 2026

HackMelbourne

Apr. 2026 – Apr. 2026

Melbourne

The flagship Hackathon event ran by UMSU club HackMelbourne at The University of Melbourne

- Successfully created a functional game with a built-in AI component
- Engineered an interactive game environment through Pygame, integrating a dynamic AI backend which responds in real time based on live user input
- Collaborated effectively within a 4-person team to scope, build and deploy a fully-fledged prototype within a high-pressure hackathon window.

TECHNICAL SKILLS

Languages | Python, R, C

Developer Tools | GitHub, Replit, Claude Code, Kiro, Codex, PyGame, Pandas, SQL, React

Other | consulting, data analysis, volunteering, trilingual
